

What do you do when you are a Certificate III in Laboratory Skills student?

Here's what Year 10 P-TECH student Jake did recently with his mentor Richard from ALS.

Off they went at 8am in the morning in the ALS 4WD to Forrest, Cororooke (near Colac) and Inverleigh.

Jake assisted with taking water samples out of the Barwon River across seven sites. Several bottles were collected for chemical and metal analysis as well as recording onsite temperature readings.

Water was also collected from Inverleigh and Cororooke for chemical and microbiological testing as well as testing for field chlorine.

This was an amazing opportunity for Jake and the tasks he carried out were perfectly matched to the modules of work being studied at The Gordon.
